

AI Incident Copilot for Airport Middleware

From Incident Detection to Intelligent Investigation & Recommendation

Proposed concept · Human-in-the-loop · AI recommends, engineers decide

The Current Incident Investigation Process

WHERE AIP SENTINEL SITS

AIP Sentinel
Detection & Alerting

AI Incident Copilot
Investigation intelligence
Additional layer — not a replacement

DESIGN PRINCIPLE

Keep existing alerting. Add a copilot that prepares the investigation for the engineer.

The required information is available, but engineers must manually connect the dots across multiple sources.

AI Incident Copilot

Example: AODB Incident Investigation

Future Vision

PHASE 1

ASSIST

AI analyzes incidents and recommends next steps.

PHASE 2

LEARN

Use engineer feedback and resolved incidents to improve recommendations.

PHASE 3

PREDICT

Identify recurring patterns and possible risks earlier.

PHASE 4

CONTROLLED AUTOMATION

Potential automation for approved, low-risk actions with proper validation.

KEY BENEFIT

Reduce incident investigation time while keeping the engineer in control.

Human-in-the-loop
